**Thank you for hearing my objections to** Council's apparent acceptance of the words "Climate Change" to represent a significant threat — one that automatically commands government action, legislation and/or spending.

I also object to any Councillor who will vote to jeopardize our **Energy** Security whenever those magic words "Climate Change" are invoked.

**Example**: On August 29, two Kawartha Lakes Environmental Advisory Committee representatives made a deputation that asked Council to oppose the Expansion of Gas Plants in Ontario for reasons of Climate Change. (Report PLAN2023-04). I hope Council has rejected that request.

The purpose of this deputation: (Advocates for Civil society)

To satisfy your constituents that this Council has the scientific knowledge to competently make decisions on their behalf regarding the hypothesis that *'Climate Change is a significant threat requiring a government response'* (henceforth to be referred to as *"the CC Theory"*)

This is a question of **Public Confidence in our elected representatives.** 

To test your scientific knowledge and your commitment to put our constituents first, please consider the following 3 Questions relating to the CC Theory.

If you decide answer them later in writing, please reference published scientific papers (only submissions from recognized scientific journals will be accepted) which describe the Mechanism of Action at the molecular level and provide the data collected by the researchers.

### **QUESTION #1**

According to <a href="https://pulsegrow.com/blogs/learn/co2">https://pulsegrow.com/blogs/learn/co2</a> 'The Ultimate CO2 Guide for Indoor Growing', the optimal level of atmospheric CO2 for plant growth within a greenhouse ranges from 600 to 1500 PPM. These levels are magnitudes higher than outdoor CO2 levels of ~415 PPM.

Please explain how and why greenhouses do not burst into flames when CO2 levels exceed 600 PPM?

### **QUESTION #2**

Antonio Guterres, Secretary-General of the UN, recently made this public announcement: "... we have entered **the era of global boiling**".

Please explain why a pot of water doesn't boil inside a greenhouse when CO2 levels reach 1500 PPM?

SHOULD WE TRUST the United Nations, the IPCC, or any other global government body when their leaders make such outrageous statements like this "global boiling" claim?

## **QUESTION #3**

Energy Security = reliable and affordable energy for everyone. Green Energy sources cannot replace fossil fuels to meet our needs. Politically, Energy Security is everyone's concern, yet only a minority of people believe the "climate crisis" claims.

Will Council prioritize our Energy Security above all else whenever an unsubstantiated Climate Change proposal is presented to it?

# I propose that Council:

- 1. **Declare Energy Security** the top priority over any proposals made that are based on the **CC Theory**.
- 2. Require proof. Reject "climate change" as a magic phrase that must automatically command your serious attention. Expect verifiable and specifically-related scientific proof before any Climate Change proposal is considered by Council.
- 3. **Spend no additional time, money or resources** on any future submissions to Council that are alleged to be public concerns based on the **CC Theory**, such as Report PLAN2023-04.
- 4. Represent **100% of CKL constituents,** not just those who believe the **CC Crisis Theory**.
- 5. Answer the above 3 Questions on Kawartha Jump In to demonstrate Council's understanding of the science relating to the CC Theory.
- 6. **Become aware of alternative points of view**. I have listed only 10 reference sources that address the actual science and the politicalized science associated with the CC Theory.
